- East Zone – Sydney, Brisbane, Gold Coast
- South Zone – Melbourne, Adelaide, Hobart
- West Zone – Perth, Fremantle
- North Zone – Darwin, Townsville, Alice Springs

BRD-Business Requirement Document

Project Title

Sales Performance Dashboard – PacificEdge Ecommerce

Business Context

PacificEdge ECommerce is an online retail company operating across multiple regions in Australia. The company receives sales data periodically and requires a centralized dashboard to monitor business performance across regions, products, and time.

The dashboard will replace manual Excel-based reporting and provide management with a single source of truth for decision-making.

Business Challenge

- Sales data received in multiple Excel files over time
- Manual analysis is time-consuming and error-prone
- No single view of regional and product performance

Key Business Questions

- How are overall sales performing across Australia?
- Which regions and cities generate higher revenue?
- Which product categories perform best?
- How do sales trends change over time?

Objective of the Dashboard

The objective of this dashboard is to

- Analyse overall sales performance
- Track trends across time periods
- Compare performance across regions and products
- Provide actionable insights to support management decisions

Targe End Users

The dashboard is intended for

- Senior Management
- Business Managers
- Operations and Sales Teams
- Reporting and MIS Analysts

Data Sources

The dashboard will use internal sales data provided in Excel format

Data includes:

- Monthly sales transaction files
- Product master data
- Branch and location details
- Date and time information

All data is assumed to have a consistent structure and format.

Data Model (High-Level)

The dashboard will be built using a multi-table star schema:

Fact Table:

Order Details: Contains daily sales transaction data used for reporting and analysis

Dimension Tables:

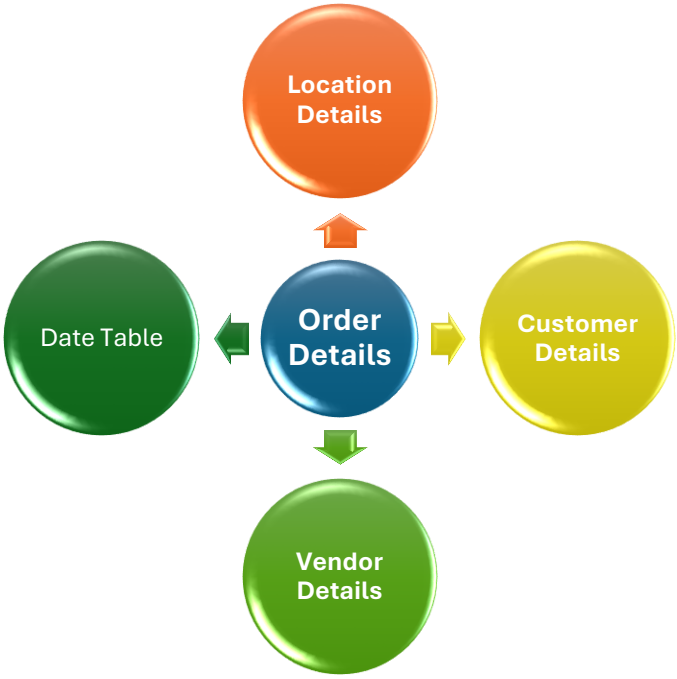
Vendor Details: Contains List of unique vendors selling their products and vendors list will be reconciled every end of the month

Customer Details: contains list of unique costumers ordering the products and data will be updated on real time

Location Details: Contains All the locations with State, City, Zone, and sate code

Date Table: Contains calendar information such as date, month, year, and other time attributes required for analysis

Star Schema – High Level Design



These tables will be connected using appropriate relationships to ensure accurate calculations and reporting.

Key Performance Indicators (KPIs)

The dashboard must display the following KPIs:

Total Sales -Total revenue generated during the selected period.

Total Orders -Total number of customer orders.

Total Quantity Sold - Total Quantity Sold

Average Order Value (AOV) - Average revenue per order.

Required Dashboard Pages

Executive Summary Page

- Display key KPIs
- Provide a high-level view of business performance
- Designed for quick decision-making

Sales Performance Analysis

- Sales trend over time (monthly / yearly)
- Comparison of performance across periods

Regional Performance Analysis

- Sales by zone, state, and city
- Identification of high-performing and underperforming regions

Product Performance Analysis

- Sales by product category
- Top-performing and low-performing products

Visual Requirements

The dashboard should include:

- KPI cards
- Line charts for trends
- Bar or column charts for comparison
- Tables for detailed views (where required)

All visuals should be:

- Simple and easy to understand
- Clearly labelled
- Consistent in design and colour usage

Filters and Slicers

The dashboard must provide interactive filters for:

Year, Month, Zone, State, City, Product Category

Filters should apply consistently across all relevant pages.

Functional Requirements

- Dashboard should update automatically when new data is added
- Data refresh should not require changes to the data model
- Calculations must reflect accurate totals and aggregations

Non-Functional Requirements

- Dashboard should be easy to navigate
- Load time should be reasonable
- Visuals should be readable on standard screen resolutions
- Design should follow a clean and professional layout

Tools and Technologies

- Data Preparation: Power Query
- Data Modelling: Power BI Data Model
- Visualization: Power BI
- Documentation: Microsoft Word

Dashboard Refresh Frequency: **Every day at 11:00 AM**

Designed BY : Team Name

Project Manager : Approval Manager Name

Date : Date Dashboard Handed over to Stockholder
